Introduction

In 2025, our organisation continued to evolve within a constantly changing digital and societal landscape. This annual report highlights our main achievements and progress. These are organised around seven key areas of activity.

Our primary objective is to serve our communities by fostering collaboration and engagement within our network. Connectivity remains at the heart of our mission and ensures a reliable, high-performance infrastructure to support all our beneficiaries. Our staff are our greatest asset, and we remain committed to attracting, developing and retaining talent.

Through our products and services, we strive to deliver added value and innovation tailored to the needs of our users. Our innovation projects explore new opportunities and technologies, thereby preparing us for the future.

Security is embedded in everything we do, protecting our systems, our data and our users. Finally, our finance function ensures sustainable growth and the responsible management of resources.

Together, these seven areas form a comprehensive framework for understanding our activities and our impact up to 2025. We hope you enjoy reading it!

Communities

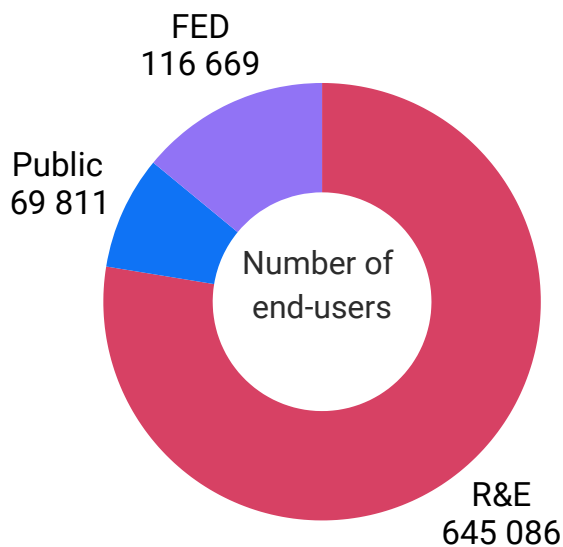

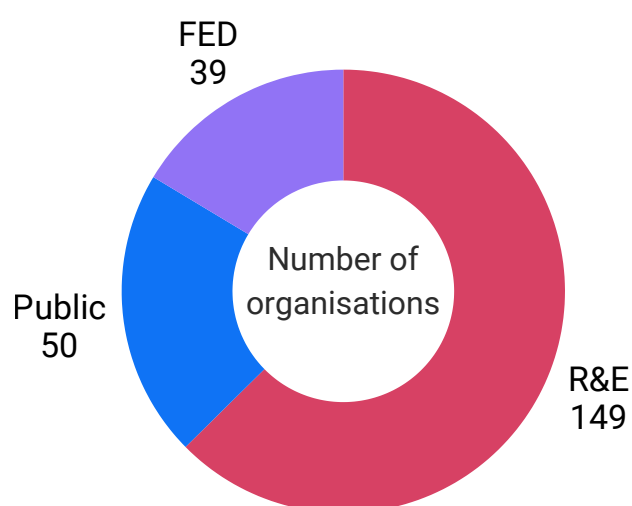

In 2025, Belnet continued its commitment to listening to its various communities, ensuring that it met their specific needs as effectively as possible.

end-users per Belnet community

That same year, Belnet also reached out to its audiences by organising various events, notably marked by the relaunch of its annual conference, now known as Belnet Community Day.

18 EVENTS

800 PARTICIPANTS

Furthermore, Belnet has optimised its support service by reorganising it into two distinct areas: on the one hand, the management of incidents and technical enquiries, and on the other, the handling of administrative enquiries and those relating to its service offering.

Connectivity

In 2025, total traffic on our backbone continued to grow, reflecting the ever-increasing use of our infrastructure.

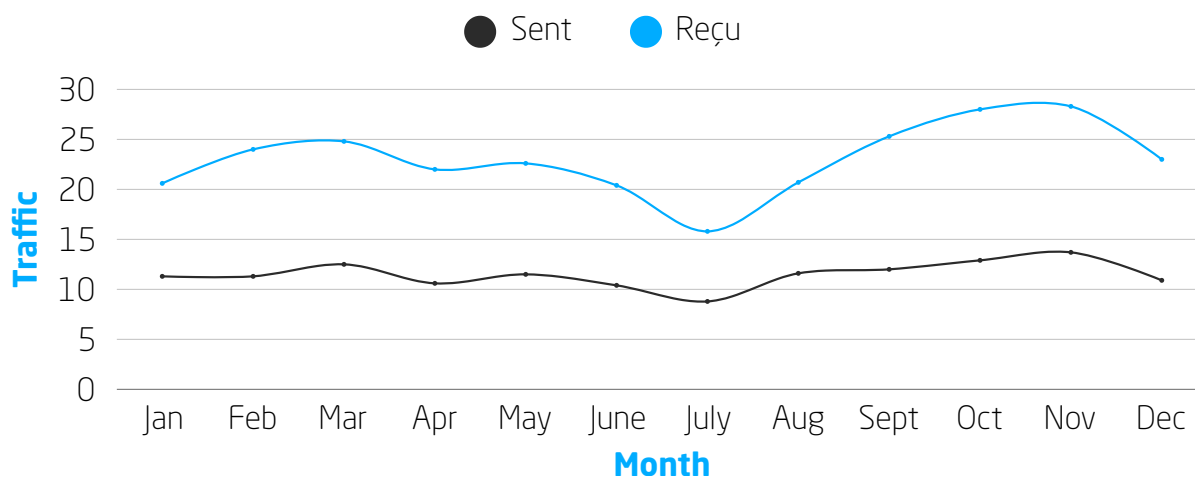

Belnet has maintained a high level of network stability, ensuring reliable internet connectivity that enables our institutions to operate within a high-performance IT environment.

This robustness provides a vital foundation for the development of innovative services tailored to the needs of our communities.

External traffic Belnet network

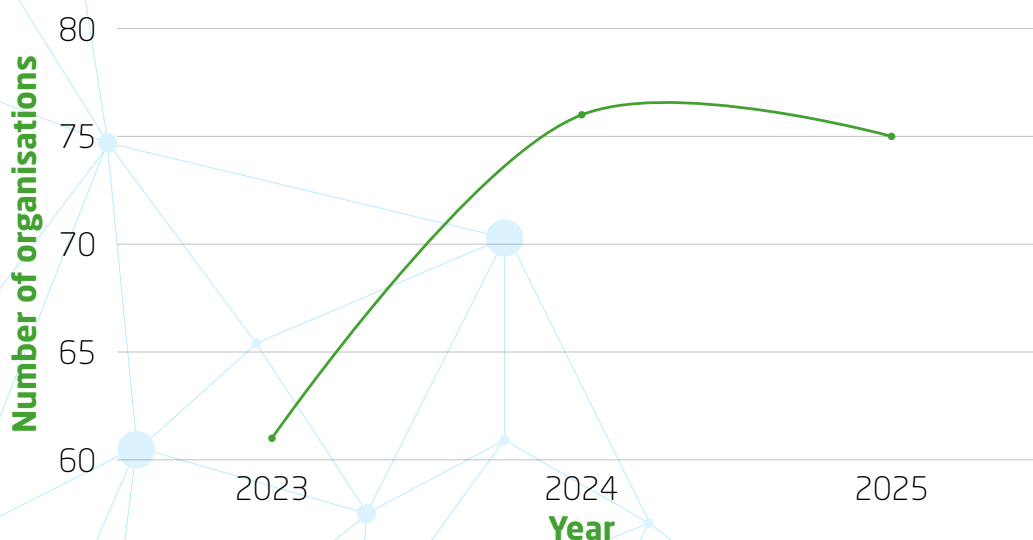

In Petabyte per month

The modernisation of the BNIX platform has been successfully completed. This enables us to expand our geographical reach more easily, increase port density and meet our customers' specific needs.

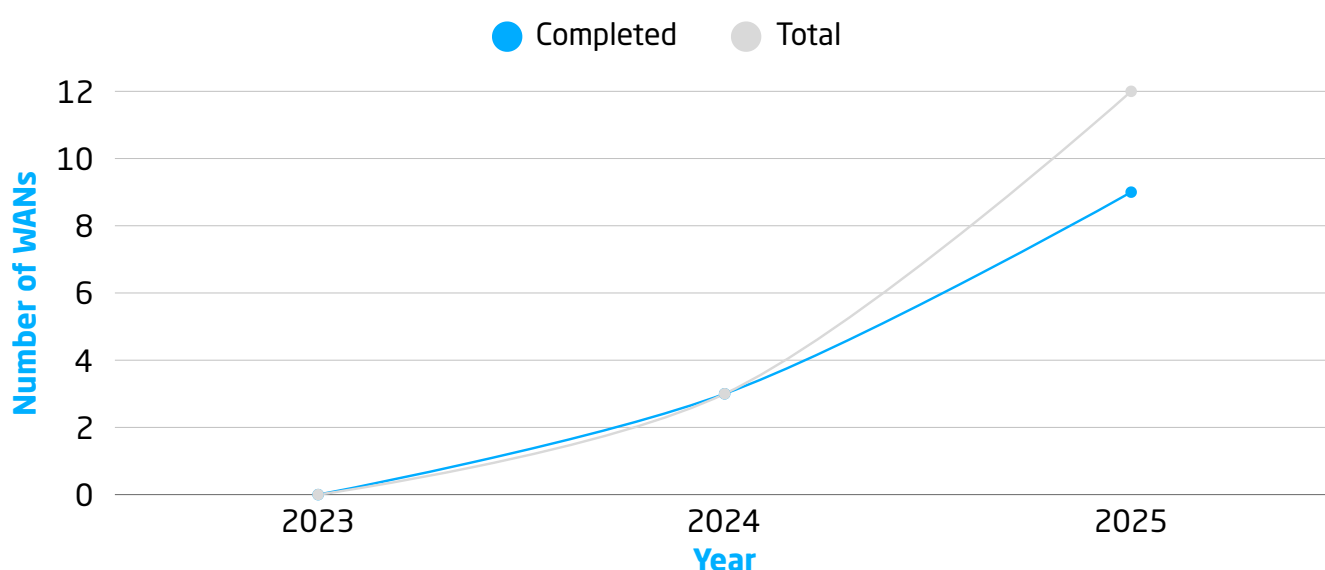

And all this whilst consuming just a third of the energy compared with the old platform.

Number of BNIX participants

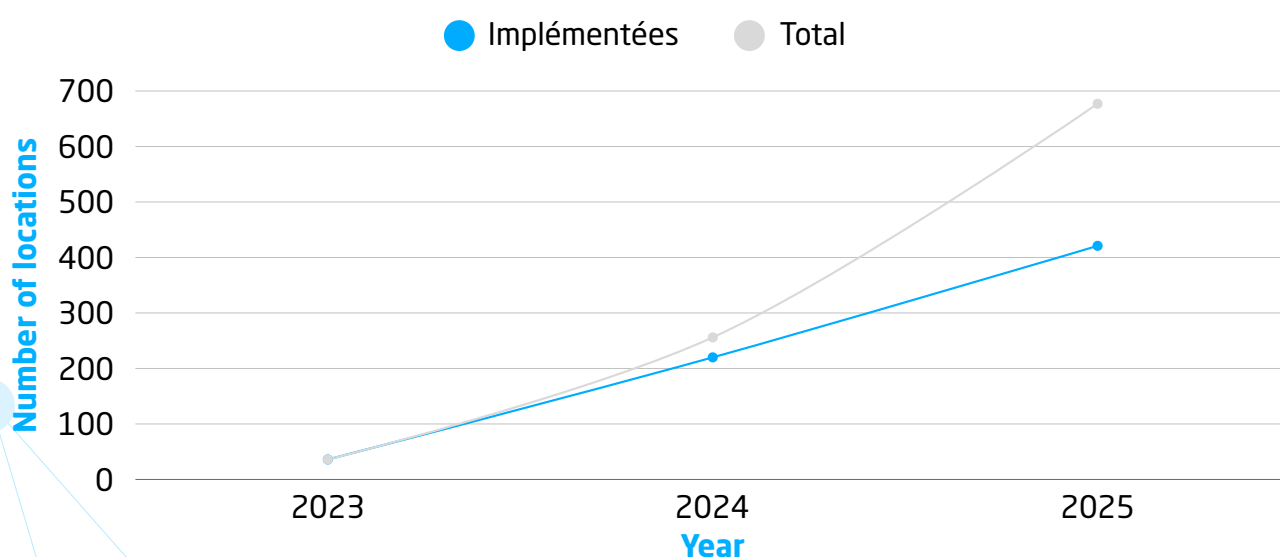

Throughout the year, Belnet also continued the migration of WAN lines and made further progress towards providing comprehensive support for WAN connectivity across all federal public services. This development enables economies of scale to be realised, particularly through the synergies that have been established, whilst simplifying the day-to-day management of connectivity for the federal public services.

Product and Services

In 2025, Belnet continued to develop and optimise its existing services in order to best meet the needs of its various communities.

Following the unilateral termination of the certificate provider's contract, significant efforts were made both by GÉANT, which had to identify a new service provider, and by Belnet, which ensured that the transition was as smooth, transparent and efficient as possible for its users.

Furthermore, usage of the FileSender and FedSender services has grown significantly, leading to increased demand on our teams to ensure appropriate support and maintain the quality of service.

Innovation Projects

In 2025, BELNET continued to work on several strategic projects relating to innovation, security and support for scientific research.

GÉANT

Since January 2025, BELNET has been participating in the European GN5-2 project, coordinated by GÉANT, which aims to strengthen expertise in network infrastructure, cybersecurity and cloud services within the European research network community.

FedOSC

BELNET is also leading the FedOSC project, in collaboration with BELSPO and the federal scientific institutions, with a view to promoting Open Science and open access to research publications and data. As part of the FedOSC project, BELNET has taken over the management of DMP Online, a platform for creating and managing research data management plans. The service continued to grow in 2025, with a steady increase in usage.

BOOSTED

The BOOSTED project, carried out in collaboration with the Royal Observatory of Belgium and supported by BELSPO, aims to ensure the secure transmission of ultra-high-precision time and frequency signals over the BELNET network, whilst laying the groundwork for the future BTFS (Belgian Time & Frequency Service).

BE-QCI

Finally, BELNET is contributing to the roll-out of the Belgian quantum communication network, BeQCI, which is designed to secure the exchange of sensitive data using quantum technologies.

Security

Our security teams were fully mobilised following an incident in April 2025. Having identified the source of the vulnerability, they implemented – and are continuing to implement – the necessary protective measures to strengthen the security of our infrastructure in the long term.

From an operational perspective, our DDoS mitigation service has been enhanced with a dashboard that provides a real-time view of ongoing attacks and the mitigation measures deployed to neutralise them.

ElIn 2024–2025, the Federal Scientific Institutions (FSI) and hospitals in turn took part in the training programme developed in collaboration with the Belgian Centre for Cybersecurity (CCB). This programme helps participants to set up and conduct cyber crisis simulations within their organisations.

In October, Belnet organised the Benelux Security & Privacy meeting for the second time, in collaboration with the Dutch and Luxembourgish research networks SURF and Restena; around sixty experts attended the event.

Also in 2025, Belnet switched to a new security awareness platform to train its staff on security risks.

64%

Collaborateurs

In 2025, as in every year, Belnet was able to rely on the talents of its staff to continue its mission in the service of its communities.

In 2025, Belnet welcomed 11 new staff members, including several junior staff for whom this was their first job. Among them was Mike De Decker, who made a name for himself at TNC25 by being selected for GÉANT's Future Talent Programme.
