2. Results by tax	14
3. Methodological notes	16
List of introduced measures	16
List of eliminated measures	20
4. Appendix	21

Introduction ¹

1.

This inventory is an update of the list in the advice of the High Council of Finance (HCF) to the Minister of Finance containing a complete inventory of all exemptions, deductions and reductions affecting the revenues of the State. This advice, issued on 25 July 1985 (See annual report 1985 of the High Council of Finance, Belgian Official Gazette of 18 April 1986, p. 5,320.) is the basis of the inventory, which is updated every year to take into account the tax provisions abolished or added since that date. In addition, like the previous editions, the inventory takes into account the provisions contained in Article 2 of the Law of 28 June 1989 amending the laws on state accounts. Moreover, the Law of 22 May 2003 on the organisation of the budget and the accounts of the Federal State stipulates that the Inventory of Tax Expenditure must be attached to the Budget (art. 47).

2.

The HCF has defined the concept of 'tax expenditure' as follows: 'A revenue forgone due to tax concessions resulting from a derogation from the benchmark of a given tax for the benefit of certain taxpayers or of certain economic, social, cultural, ... activities and which can be replaced by a direct payment'. Each element of this definition is further explained below. The term 'benchmark' is the key concept in the definition of a tax expenditure. It is defined separately for each tax below.

3.

Personal income tax (PIT) regulates the taxation of the net income of individuals, after deducting the costs incurred to acquire or maintain that income. Total net income is the sum of the following categories: income from immovable property, income from movable property and capital, professional income and miscellaneous income. The aforementioned categories are taxed under the ordinary system of taxation, unless they are mentioned in Article 171 of the Income Tax Code 1992 (ITC 92). In that case, they are taxable separately. The benchmark includes the definition of the tax unit (i.e. the family) and determines the taxability according to the composition of that tax unit and the number of persons declaring income. Through the personal income tax, the worldwide income of the national residents is taxed, taking into account the double taxation treaties and national legal provisions aimed at eliminating or reducing double taxation.

4.

Corporate income tax (CIT) consists in taxing corporate profits, regardless of their use, but after eliminating the double taxation of distributed and undistributed profits and after deducting previous losses. Measures of the international double taxation conventions and those of national legislation that pursue the same objective are considered part of the benchmark.

5.

In principle, the earned income withholding tax (EIWT) is retained by the employer and paid in full to the Treasury. It is calculated on the basis of rules that may vary depending on the nature of the income. These rules constitute the benchmark and the amount withheld is then fully chargeable to PIT. The partial exemptions from withholding tax that employers may enjoy are tax expenditures. They aim to support and encourage certain sectors and groups of workers, for example, through tax reductions for night and shift work, researchers, start-ups, and employers in specific industries such as construction and sports. The undistributed amounts increase employer cash flow and can boost employment within these groups or sectors, contributing indirectly to the economy. In some cases, these measures create a corporate tax payback effect to the extent that the received revenues constitute additional taxable income. This inventory does not account for these possible clawback effects.

¹Original Advice HCF: https://www.ejustice.just.fgov.be/mopdf/1986/04/18_1.pdf

6.

The capital income withholding tax on dividends and interests (WT) is a final tax for individuals and for persons subject to legal entities tax. For companies, however, it remains an advance payment of the final tax. Derogations where this withholding tax serves as the final tax are considered tax expenditures, unless their purpose is to avoid or reduce double taxation internationally. In contrast, a measure that reduces withholding tax or introduces exemptions is not considered a tax expenditure if the beneficiary is a company subject to CIT, given that there is no revenue forgone in CIT.

7.

The general excise duty system consists of applying a rate to each type of product. The exemptions or reductions granted to some consumers or as a function of use can be considered tax expenditures but the variety of rates by type of product is an essential feature of the general system. The exemptions imposed by European directives are considered part of the general system and are not described in the Inventory (Directive 2003/96/EC for energy products and electricity, Directives 92/83/EC and 92/84/EC for alcohol and alcoholic beverages, Directive 2011/64/EU for manufactured tobacco, and finally Directive 2008/118/EC for movements of excise goods). In contrast, the exemptions introduced by Belgium, which are allowed by the European directives, are considered tax expenditures.

8.

Registration duties are defined by taxable event. The diversity of duties as a function of the taxable event is an essential feature of the benchmark but the exemptions or reductions granted for a given duty are to be considered tax expenditures. The contribution rate was reduced to 0 percent in 2006. This rate has since represented the benchmark and, consequently, there is no longer any loss of revenue resulting from tax expenditure.

9.

Value-added tax (VAT), which is based on the principle that every intermediary in the link adds some value, regulates the taxation of supplies of goods and services carried out on the national territory. The exemptions imposed by the European Directive 2006/112/EC do not constitute tax expenditures but are logically part of the benchmark. They belong to the European reference system and cannot be changed by Belgium. The exemptions authorised by the directive and applied by Belgium are considered tax expenditures. The European rules allow one or more reduced rates. Their application is considered a tax expenditure. Indeed, reduced rates usually meet the basic characteristics of a tax expenditure: they have an incentive character and/or are derogations 'in favour of certain taxpayers or certain economic, social and cultural activities' and can be replaced by direct subsidies.

10.

A tax expenditure is not only a deviation from the benchmark, it is also characterised by the fact that it aims to change the behaviour of (certain) taxpayers. A tax expenditure alters the tax burden which creates a price incentive which, in turn, can influence the decision process of economic agents (i.e. family, business, etc.). The behavioural effect, and subsequent revenue forgone, depends on the respective income and substitution effects, but also the socio-economic context such as the business cycle, income distribution, labour market functioning, tax system and other subsidy mechanisms. A tax expenditure is aimed at supporting a particular group of taxpayers or encouraging specific activities. This can range from broad measures that benefit a large part of the population to highly targeted benefits that appeal only to a specific group. The scope of a tax expenditure ranges from universal to highly specific, depending on its scope and objective. To illustrate, tax expenditures related to dependent children are broad social measures to support families. On the other hand, tax expenditures related to R&D are more specific to certain niche sectors or certain forms of innovation. The last element in the definition notes that this objective could also be achieved by direct budgetary targeting. Regardless of the administrative treatment, direct targeting is economically equivalent. This points to the need for equivalent treatment of tax expenditure in relation to explicit expenditure in the Resources Budget.

11.

The summary tables of this inventory classifies tax expenditures - by tax type - according to their objectives. These objectives are the following: authority-government; social measures; employment; investment - entrepreneurship; real estate; savings and credit; environment; R&D; special sectoral provisions and a various group. Benchmark measures are also classified but are not part of the summary tables. They are, however, listed in the detailed tables in the appendix.

12.

The tax provisions included in the inventory are those applicable during the year or assessment year for which the most recently quantified estimates are available. The latest quantified estimates store:

- 2023 for personal income tax
- 2023 for corporate income tax
- 2024 for withholding tax on earned income, dividends and interests
- 2023 for value added tax
- 2024 for excise duties

However, in the tables below, regrouping the various taxes, the totals and comparisons between them are made on the basis of one and the same period, in this case the year 2023.

13.

The inventory also explains the general *modus operandi* of tax expenditures. It covers exemptions, tax credits, tax reductions, deductions from taxable income, deferrals of payment, and reduced rates. This classification should always be seen in relation to the respective benchmark. Moreover, the variation within the categories is large, meaning that the same category may include different measures with different effects and conditions. Thus, this classification always remains indicative.

14.

Quantification is done by the so-called ‘revenue forgone’ method. This calculation method estimates the amount of marginal revenue loss associated with the existence of a particular tax provision. Consequently, the calculation is carried out per tax expenditure. It is a static ex-post calculation. Therefore, it does not take into account the derived behavioural effects arising from the existence of the provision. However, because the calculation is done on a provision-by-provision basis, some derived ‘mechanical’ effects are taken into account. For example, the removal of a tax cut on taxable income in personal income tax may change the rate or amount of a tax cut granted in a subsequent stage.

15.

The application of this method is as follows: With regard to PIT, the calculations are made either on the basis of the SIRE micro-simulation model, which assumes a representative sample, or on the basis of statistical data established when the tax is enrolled. As for the SIRE model, the sample is drawn randomly, by region. However, the draw share differs between Flanders and Wallonia (1/200) on the one hand and Brussels on the other (1/50), this to ensure better representativeness of the Brussels Capital Region in the context of the Sixth State Reform. With regard to CIT, the calculations are made either on the basis of the MISis microsimulation model or on the basis of statistical data drawn up when the tax is enrolled. The cost of the partial earned income withholding tax exemptions is derived directly from statistical data on withholding tax returns. For other taxes and duties, the results shown are obtained by directly applying the normal rates to transactions not subject to these rates. In the absence of appropriate and sufficient data at tax administrations, external data are used; this is the case, *inter alia*, for exempt income.

16.²

This inventory is an annex to the Budget and aims to inform the Chamber of Representatives of the cost of tax expenditures decided by the federal government. Based on this principle, it should therefore not include the amounts of ‘tax deductions, exemptions or reductions’ granted or maintained by the regions in the framework of their fiscal powers. Therefore, this Inventory does not contain chapters relating to inheritance tax, property tax or road tax. However, regionalised tax expenditures remain listed in this Inventory in the chapter on personal income tax, in order to provide an overview for this tax in which both federal and regional tax expenditures exist. Thus, this Inventory does not contain a complete overview of all existing regional tax expenditures. This classification is also not directly related to the regional PIT allocation. Interaction effects where federal measures affect regional revenues and regional measures affect federal revenues are not reflected in this inventory. The section below describes the various effects within PIT.

16b.³

Measures relating to exemptions, deductible costs, exemptions, or deductible expenses have an impact on taxable income. Except when they relate to the federal income box, these measures in principle have an impact on both federal (approx. $\frac{3}{4}$ of the impact) and regional (approx. $\frac{1}{4}$ of the impact) personal income tax revenues. The basis for calculating supplementary municipal taxes is also affected in principle. **Measures affecting the rate** have, in principle, an impact on both federal (approx. $\frac{3}{4}$ of the impact) and regional (approx. $\frac{1}{4}$ of the impact) personal income tax revenues, except when they relate to the federal income box. The basis for calculating supplementary municipal taxes is also affected in principle. **Federal tax reductions** have an impact in principle on both federal (approx. $\frac{3}{4}$ of the impact) and regional revenues (approx. $\frac{1}{4}$ of the impact) from personal income tax. Other federal tax reductions reduce federal revenues from personal income tax. **Regional tax reductions** reduce regional revenues from personal income tax. Tax reductions also reduce the basis for calculating supplementary municipal taxes. **Federal tax credits** reduce federal income tax revenue. **Regional tax credits** reduce regional income tax revenue. Tax credits have no impact on the basis for calculating supplementary municipal taxes. **Federal tax increases** increase federal revenue from personal income tax. They have no impact on the calculation basis for supplementary municipal taxes.

1. Global results ²

As indicated in the introduction, the latest estimates in this Inventory are for 2023 for direct taxation (PIT and CIT), and 2024 for withholding taxes on earned income, dividends and interest, and indirect taxation (VAT, excise duties). The estimates in this Inventory are compiled by tax and refers to the year 2023.

Table 1

Table 1 shows the aggregate revenue forgone due to tax expenditures by tax, with a notable increase in VAT in 2022, while tax expenditure on excise duties decreased. This evolution is partly explained by high inflation, which drove up tax expenditure in nominal terms, especially for VAT, where price increases have a direct impact.

Table 1: Revenue forgone by tax expenditures (mil. €)

	2018	2019	2020	2021	2022	2023	Average annual growth (%)
Corporate income tax	2.300,91	3.361,37	2.348,22	2.561,91	3.561,55	3.809,42	10,61
Earned income withholding tax	3.174,95	3.408,29	3.705,98	3.888,87	4.198,84	4.415,48	6,82
Excise duties	2.895,75	3.171,14	3.479,45	3.094,08	2.405,58	2.440,76	-3,36
Personal income tax (federal)	7.670,75	7.331,09	8.120,29	8.380,94	8.880,63	9.671,01	4,74
Personal income tax (regional)	2.615,88	2.596,74	2.429,25	2.407,57	2.342,79	2.251,79	-2,95
Value added tax	10.108,42	10.494,69	10.369,81	12.326,52	15.345,64	16.198,20	9,89
Withholding tax on interests and dividends	172,94	183,28	174,68	187,02	179,71	615,34	28,90
Total	28.939,60	30.546,60	30.627,68	32.846,91	36.914,74	39.402,01	6,37

²See the detailed tables at: https://financien.belgium.be/nl/Statistieken/_en/_analysen/statistische-cijfers/budget-ontvangsten

Table 2

Table 2 shows the revenue forgone as a percentage of the yield of the corresponding tax. In terms of PIT revenue, tax expenditure is split between federal and regional measures in PIT. Total federal tax expenditures are then expressed as a share of federal PIT revenue and the total regionalised tax expenditures as a share of regional PIT revenue. CIT revenues refer to the global resulting tax revenues of that year. For the other taxes, the yield is shown on an ESA 2010 basis. Thus, the numerator and denominator have a common base. These percentages are calculated on the current yield: they thus indicate by how much (percent) the yield of a tax would increase, *ceteris paribus*, if all tax expenditures whose impact could be quantified were abolished.

Table 2: Revenue forgone in % of tax revenues

	2018	2019	2020	2021	2022	2023
Total	28,39	29,34	30,51	29,15	29,53	29,42
Average	21,43	22,38	23,09	21,48	20,82	21,23
Corporate income tax	16,51	21,44	15,35	14,29	16,40	16,17
Earned income withholding tax	6,67	7,16	7,65	7,65	7,32	7,34
Excise duties	30,43	33,51	41,14	32,74	25,80	23,51
PIT federal	22,32	21,59	23,26	22,70	21,38	21,97
PIT regional	27,74	27,70	24,64	22,77	19,14	17,09
Personal income tax	23,49	22,91	23,56	22,72	20,87	20,85
VAT	32,57	32,84	36,00	35,95	42,59	43,30
Withholding tax on interest and dividends	4,75	4,95	5,70	5,31	4,33	11,41

Table 3

Table 3 summarises the classification by intended objective. These data are indicative since it is often difficult to unambiguously determine the objective envisaged by the legislator. Tax expenditures for which the revenue forgone are quantifiable mainly correspond to socio-economic objectives.

Table 3: Classification by objective (in mil. euros and in % of total (2023)

Objectif	Number of measures	Revenue forgone (mil. €)	Revenue forgone (%)
Employment	55	5.434,88	13,79
Environment	26	87,53	0,22
Government	7	622,81	1,58
Investment	10	1.329,16	3,37
R&D	11	3.086,75	7,83
Real estate	28	5.441,59	13,81
Savings and credit	21	1.681,62	4,27
Sectoral	47	3.258,65	8,27
Social	14	16.688,55	42,35
Various	36	1.770,47	4,49
Total	255	39.402,01	100,00

Table 4

Table 4 shows the distribution by objective within each tax.

Table 4: Revenue forgone by objective (in % of tax revenues)

Objective	Excise duties	Corporate income tax	Earned income withholding tax	Personal income tax	Value added tax	Withholding tax on interests and dividends
Various	10,07	1,92	0,24	0,05	0,04	1,55
Sectoral	12,91	0,20		0,01	4,98	
Environment	0,53	0,06		0,03		
Social	0,00			10,57	28,44	
Employment		1,15	4,50	4,29		
R&D		6,46	2,60	0,00		
Government		0,90		0,24	0,73	0,00
Investment		5,47		0,07	0,00	
Savings and credit		0,00		2,01		9,86
Real estate				3,56	9,10	
Total	23,51	16,17	7,34	20,85	43,30	11,41

Table 5

Table 5 shows, for a given objective, the distribution of the corresponding tax expenditure according to the taxes used.

Table 5: Revenu forgone by tax base (in % of revenue forgone by objective)

Revenue forgone (%)	Corporate income tax	Earned income withholding tax	Excise duties	Personal income tax	Value added tax	Withholding tax on interests and dividends
Employment	7,12	61,31		19,28		
Environment	0,40		2,24	0,09		
Government	5,57			1,18	1,69	0,00
Investment	33,83			0,79	0,00	
R&D	39,98	35,37		0,03		
Real estate				17,68	21,01	
Savings and credit	0,00			10,03		81,37
Sectoral	1,22		54,91	0,06	11,51	
Social			0,01	50,73	65,69	
Various	11,87	3,31	42,84	0,14	0,10	18,63
Total	100,00	100,00	100,00	100,00	100,00	100,00

Table 6

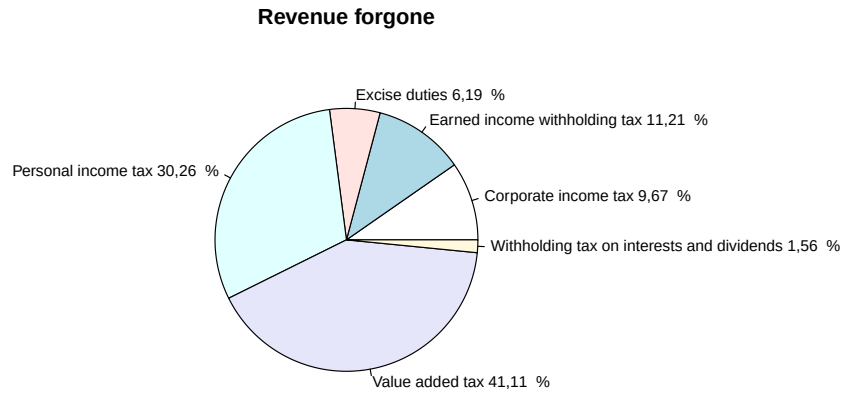

Table 6 shows, for a given objective, the distribution of the corresponding tax expenditure by competent authority. The distribution of tax expenditure in PIT between federal tax expenditure and regionalised tax expenditure (as a result of the transfer of certain fiscal competences) under the Special Finance Act varies widely as a function of objective.

Table 6: Revenue forgone by competent authority (in % of revenue forgone by objective)

Revenue forgone (%)	FED	BRU	VLA	WAL
Employment	22,53	18,05	7,19	1,93
Environment	0,04			0,77
Government	1,46			
Investment	0,98			
R&D	0,03			
Real estate	0,23	76,64	90,15	95,51
Savings and credit	11,82	5,30	2,66	1,79
Sectoral	0,07			
Social	62,67			
Various	0,17			
Total	100,00	100,00	100,00	100,00

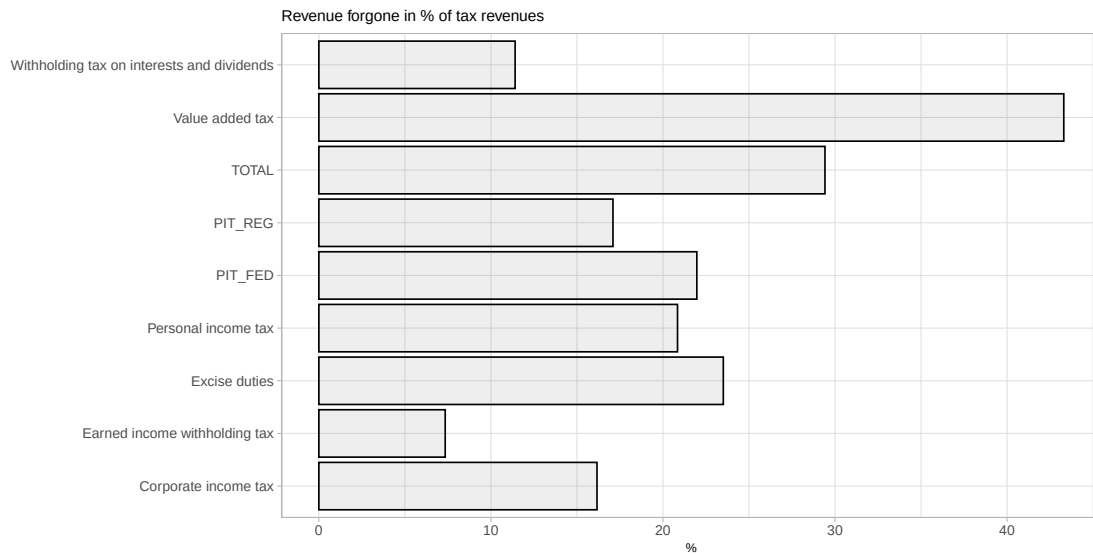

Plot 1

Most of the quantified revenue forgone is in PIT and VAT.

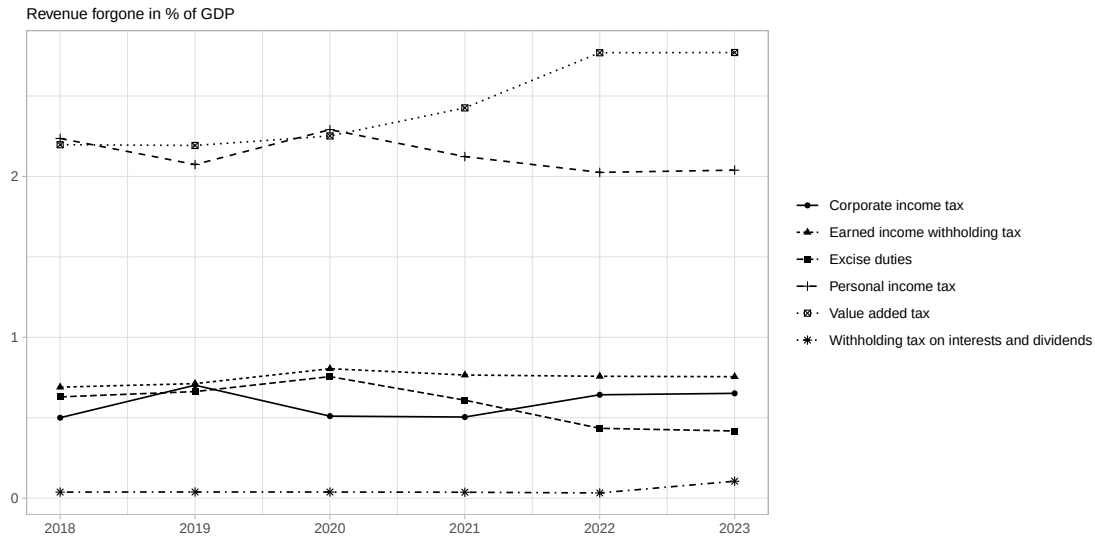

Plot 2

Revenue forgone, expressed as a percentage of tax revenue, are highest for VAT. This is followed by excise duties and PIT.

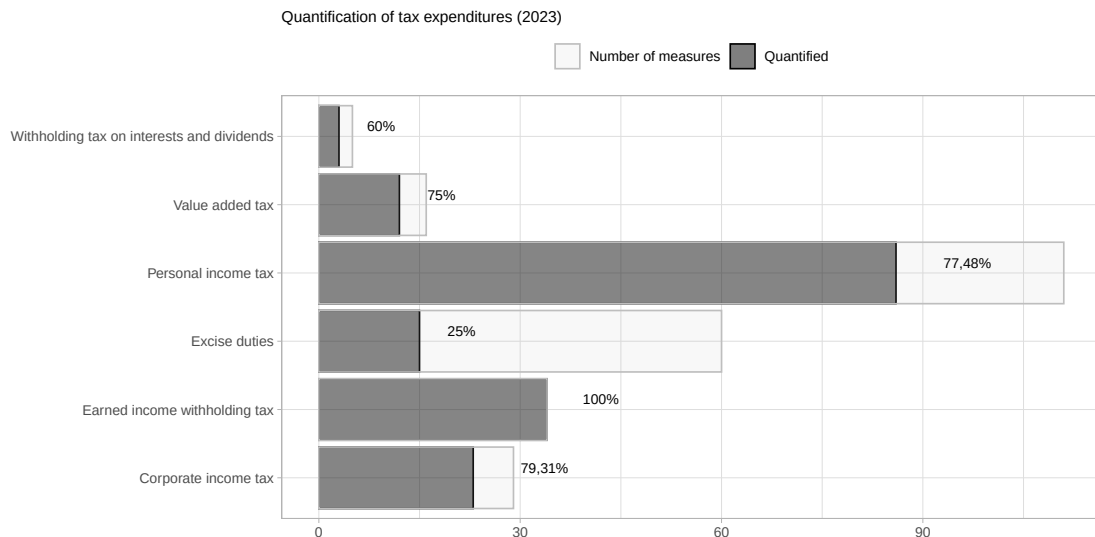

Plot 3

Revenue foregone as a percentage of GDP has remained relatively stable for most taxes since 2018. Total aggregate revenue foregone represented 6,74 percent of GDP in 2023.

Plot 4

This graph shows the share of quantified measures per tax. In general, most measures are quantified. Excise duties account for only a minority of the measures calculated. It should be noted that there is a distortion with regard to VAT due to the grouping of different measures under the same heading. The reason a measure is not quantified is due to a lack of available data, which is often the case with tax expenditures that are exemptions. It is important to note that unquantified revenue shortfalls can lead to a distorted picture of the total amount of tax expenditure. For example, in a recent study, the Federal Planning Bureau calculated that the (para)fiscal revenue foregone due to the company car system will amount to between €3 and €5 billion from 2025 onwards. This analysis was based on a benchmark based on the costs of private use of the car for the beneficiary if he had to pay for this private use himself. The paper maps out the impact on various sources of taxation and levies. The largest losses are in personal income tax and social security contributions.

2. Results by tax

2.1. Personal income tax

The quantifiable revenue forgone regarding tax expenditure in the personal income tax had an average annual growth rate of 3,09 percent since 2018. The annual growth of federal tax expenditure is 4,86 percent, while regional tax expenditure had an annual growth rate of -2,63. A number of changes have been made for the 2024 tax year. The most important ones are listed below. The tax reduction for overtime will be temporarily extended from 130 hours to a maximum of 180 hours from 2023 until June 30, 2025. There is a favorable regime for ‘one-off innovation bonuses’ paid to employees. Such bonuses are exempt from income tax (and social security contributions). The regime will be extended until January 1, 2025. The most important change with regard to copyright concerns the description of the fees that are eligible for the attractive tax regime. From now on, these must meet more specific conditions. Another new feature is that, for tax purposes, the remuneration can only be taxed in full as copyright if the transfer of the copyright is not accompanied by a ‘service provided’. If it is accompanied by a service provided, then a maximum of 50 percent of the remuneration received is eligible for the favorable tax regime.

2.2. Corporate income tax

The quantifiable revenue forgone regarding tax expenditure in the corporate income tax had an average annual growth rate of 16,88 percent since 2018. An interesting observation is the increase in tax expenditure related to the deduction for innovation income, which has doubled for the second year in a row. This increase goes hand in hand with the gradual abolition (planned for the end of 2023) of the deduction for patent income. For the 2024 tax year, a number of changes have been made to the tax return. The main changes are briefly explained below. For example, due to the postponement of the minimum tax until the 2024 income year, it has been decided to limit the tax basket for one year to 40 percent of the amount above €1 million, and the deduction for incremental risk capital can no longer be applied. In addition, several new tax credits have been created in relation to the lump-sum allowance for business travel and the increase in the bicycle mileage allowance. An interesting observation is the increase in tax expenditure related to capital gains on shares. This expenditure has more than doubled compared to the previous year. This is mainly due to the fact that more capital gains are exempt. To a lesser extent, the restrictions on deductions due to the adjustment of the basket parameter and the elimination of the deduction for risk capital are responsible for this significant increase.

2.3. Earned income withholding tax

The partial exemptions in the earned income withholding tax had an average annual growth rate of 7,48 percent since 2018. The partial exemption from paying withholding tax for seasonal work in the agricultural and horticultural sectors was overturned by the Constitutional Court on June 12, 2025 (No. 86/2025).

2.4. Withholding tax on dividends and interests

The quantifiable revenue forgone regarding tax expenditure where the withholding tax is the final tax, had an average annual growth rate of 45,2 percent since 2018. The calculated shortfall in revenue from the exemption from withholding tax on the first bracket of savings accounts rose sharply in 2023. This trend is set to continue in 2024. Possible explanatory factors include the sharp rise in interest rates, the indexation of the exemption ceiling, and household savings behavior.

2.5. Excise duties

The quantifiable revenue forgone regarding tax expenditure in excise duties had an average annual growth rate of -0,46 percent since 2018. With regard to tax expenditures relating to excise duties, it should be noted that from April 2024, the sale of high-sulfur diesel for use as fuel or heating fuel will be prohibited in Belgium. Only the sale of low-sulfur diesel will be permitted. In addition, an increase in tax expenditure relating to the reimbursement of professional diesel is expected in 2024. Although 2020 was an exceptional year in terms of reimbursements (catching up on a significant backlog in the processing of files), the decline over the period 2021-2023 can also be explained by certain measures for temporary reductions in excise duty rates during the energy crisis, as well as by structural reductions in the reimbursement rate for professional diesel, which the government decided on at the time. The increase in tax expenditure can be explained by the end of the temporary reductions in excise duties in the first quarter of 2023. However, as taxpayers have three years to submit a refund request, a precise analysis is not possible.

2.6. Value added tax

The quantifiable revenue forgone regarding tax expenditure in VAT had an average annual growth rate of 8,9 percent since 2018. The main findings are as follows: There has been a significant increase in tax expenditures related to the 6 percent rate since 2020. This is mainly due to: the temporary rate reductions in 2020 and 2021 in the hospitality industry during the COVID-19 crisis. In 2022, given the end of these temporary reductions, tax expenditures will decrease; the extension of the application of the reduced rate for demolition and reconstruction since 2021; the temporary reduction in 2022 of the VAT rate on electricity (for private individuals) and gas (private individuals and businesses). This reduction became permanent for private individuals from April 2023; high inflation in 2022. With regard to tax expenditures relating to the 12 percent rate, it should be noted that tax expenditures for the hospitality industry will fall in 2020 and 2021, before returning to normal levels in 2022. This can be explained by the temporary support measures taken by the government during the COVID-19 crisis.

2.7 Forecasts

Results are available for tax expenditures in withholding taxes on dividends and interests, and for personal income taxes (see detailed tables). Given the complexity and the lack of budgetary estimates related to tax reforms, the forecasts do not necessarily reflect adopted policies. The forecasts are based on trend analyses, with or without consideration of the growth of taxable income, indexation, or other macroeconomic variables. The methodology is reviewed annually and published on the Federal Public Service Finance website.

Table 7: Forecasting of tax expenditures (2024-2026)

	Federal PIT tax expenditures	Regional PIT tax expenditures	Withholding tax on dividends and interests	% Fed. TE	% Reg. TE	% WT
2023	27.702,18	6.517,24	784,67	58,96	47,59	221,10
2024	18.144,63	4.125,44	1.591,94	-34,50	-36,70	102,88
2025	8.720,22	2.153,56	625,86	-51,94	-47,80	-60,69
2026			495,10			-20,89

3. Methodological notes

The tables with more detailed data are presented in the annex and published on the Federal Public Service Finance website. Tax expenditures are presented by tax and categorized by type for direct taxes, by rate and category for VAT, and by product and category for excise duties. Abolished measures are always listed at the bottom. Non-quantified tax expenditures are highlighted in gray. This may occur when data or calculation models are unavailable. No threshold is applied for very low amounts. Where possible, the legal basis for each individual measure is provided. Unless otherwise stated, references for direct taxes pertain to the Income Tax Code. For excise duties, the reference is Chapter XVIII of the Program Law of December 27, 2004 (Taxation of Energy Products and Electricity), and for VAT, the reference is the Value-Added Tax Code.

3.1. Personal income tax

The exemption scheme for additional staff will be completely abolished (Parliamentary document, Chamber, 2024-2025, no. 56-0963/001). The exemption may be granted until the 2025 tax year (draft law on various provisions, Art. 57). To be eligible for the exemption, the employee concerned must have been in service “no later than December 31, 2024.” In principle, withholding tax is an advance on the final tax that will be calculated. In principle, the withholding tax is offset against this final tax (see, for example, payroll tax). With regard to property tax, this offset has been abolished. This follows from the fact that property tax has become a genuine regional tax. The exemption from the expense allowance for members of parliament was quantified from the 2021 income year. A tax reduction was introduced for the increased bicycle allowance (CAO 164) from the 2023 income year. The measure is mentioned together with the tax reduction for travel expenses that was introduced the year before.

3.2. Corporate income tax

The group contribution scheme was quantified and added to the Inventory from the 2019 income year onwards.

3.3. Earned income withholding tax

The amounts of withholding tax not paid due to the seasonal work measure will not be reported after 2023.

3.4. Withholding tax on dividends and interests

No new comments.

3.5. Excises duties

Companies seeking a refund of excise duties for professional diesel have three years to submit their application. This inventory, therefore, includes the amounts actually reimbursed by the Federal Public Service Finance during the year, not the amounts consumed during the year.

3.6. Value added tax

The data from VAT returns are not detailed enough to allow for an estimate of most VAT tax expenditures. This is because the data consist of aggregated amounts per VAT rate rather than by type of good or service. Additionally, these figures are reported by suppliers rather than consumers, meaning they include not only final consumption but also intermediate consumption. VAT tax expenditures are estimated using various internal and external sources (VAT returns, national accounts, household budget surveys, etc.). Tax expenditures are finalized up to 2020, while the figures for 2021 and 2022 are extrapolations. Given the impact of the COVID-19 crisis and the energy crisis, the estimates for 2021 and 2022 are more susceptible to adjustments once definitive amounts are obtained, as the methodology used is less robust during such significant shocks in consumption. A correction was applied because the extrapolation for 2020 (a COVID year) produced unsatisfactory results.

List of introduced measures

Introduced measures from 2018

Measure	Objective	Type	Year
Tax: Corporate income tax			
Intervention in rent (March-September)	Various	Tax reduction	2021
Intra-group transfer scheme	Various	Deduction of taxable income	2019
Investments in semi-public charging stations	Environment	Deduction of taxable income	2021
Social liability pursuant to the unitary statute	Employment	Deduction of taxable income	2018
Tax shelter for the production and development of video games	Sectoral	Exemption	2022
Tax: Earned income withholding tax			
Additional increase overtime pay	Employment	Tax reduction	2021
Education of employees	Various	Tax reduction	2021
Researchers employed by private companies having a bachelor's degree	R&D	Tax reduction	2018
Seasonal labor	Employment	Tax reduction	2023
Temporary increase for overtime (Covid-19 measures June -August)	Employment	Tax reduction	2020
Young workers	Various	Tax reduction	2018
night work	Employment	Tax reduction	2022
nightshift work - extension to the construction sector	Employment	Tax reduction	2018
shift work	Employment	Tax reduction	2022
Tax: Excise duties			
Agriculture, horticulture, fish farming and forestry activities (petrol)	Sectoral	Exemption	2022
Dredging (gas)	Sectoral	Exemption	2022
Dredging (lpg)	Sectoral	Exemption	2022
Dredging (petrol)	Sectoral	Exemption	2022

Measure	Objective	Type	Year
For use as motor fuel or heating fuel for navigation on inland waterways (gas)	Sectoral	Exemption	2022
For use as motor fuel or heating fuel for navigation on inland waterways (lpg)	Sectoral	Exemption	2022
For use as motor fuel or heating fuel for navigation on inland waterways (petrol)	Sectoral	Exemption	2022
Tax: Personal income tax			
Acquiring new shares of companies that have seen their sales significantly reduced by the COVID-19 pandemic	Savings and credit	Tax reduction	2020
Additional reduction for replacement income	Social	Tax reduction	2020
Bonus for employees in companies that "performed well" during the Covid-19 crisis	Various	Exemption	2022
Consumption cheques	Social	Exemption	2022
Exempt voluntary overtime in critical sectors (Covid-19 measure)	Employment	Exemption	2020
First tranche of interest or dividends allocated or granted by certain social purpose companies	Savings and credit	Exemption	2018
Installation of electric charging stations	Environment	Tax reduction	2021
Investments in semi-public charging stations	Environment	Deduction of taxable income	2021
Legal Protection Insurance	Various	Tax reduction	2019
One-time bonus for certain beneficiaries of a COVID-19 transition right	Various	Reduced rate	2021
Purchasing power subsidy	Social	Exemption	2022
Renunciation of rent (Covid-19 measure: March-September)	Various	Tax reduction	2021
Social liability pursuant to the unitary statute	Employment	Exemption	2019

Measure	Objective	Type	Year
Tax credit for transport costs	Employment	Tax credit	2022
Tax shelter growing companies	Savings and credit	Tax reduction	2018
Tax: Value added tax			
Pro-deo lawyers and bailiffs	Social	Reduced rate	2021
Tax: Withholding tax on interests and dividends			
Exemption from withholding tax on income from movable property on the first bracket of dividend	Various	Reduced rate	2018

List of eliminated measures

Abolished measures from 2018
